VERTI-PRESS-C FILTER

The VPC is the next generation of Automatic Pressure Filtration technology, used for filtering and dewatering industrial and municipal wastewater applications.

FEATURES:
- Patented pneumatic seals to enclose the filter chambers instead of the clam shell open/close
- Enclosed chamber increases plant Hygiene/Safety
- Even cake formation maximizes removal and operating efficiencies
- Multiple chambers units can be isolated, thereby allowing maximum run times

BENEFITS:
- Minimum moving parts: small footprint and vertical chamber installation
- Fully automated with PLC and HMI controls
- Standard sizes from 25-400 ft² of filtration area
- High flux rates leading to higher production rates
- Sub-micron filtration

APPLICATIONS:
- Wastewater Industry
- Industrial Manufacturing
- Mining Industry
- Power Plants
- Resin Industry
- Steel/Metalworking
- Aerospace
- Plastics
